

## NSG Group...

Creating a healthier,  
cleaner, and safer world

Pilkington **SaniTise™**

For Canadian Residential Applications

**NSG**  
GROUP

# Pilkington **SaniTise™**

is a transparent pyrolytic antimicrobial glass developed by NSG Group as a commitment to creating a healthier, cleaner and safer world.

## How it works

The glass is produced with a  $\text{TiO}_2$  based pyrolytic coating deposited directly onto one glass surface. When exposed to UV radiation through natural daylight, the Pilkington **SaniTise™** coating is activated.

It then reacts with water vapor within the atmosphere resulting in a photocatalytic process that inactivates (destroys) the viruses and bacteria on the coated glass surface.

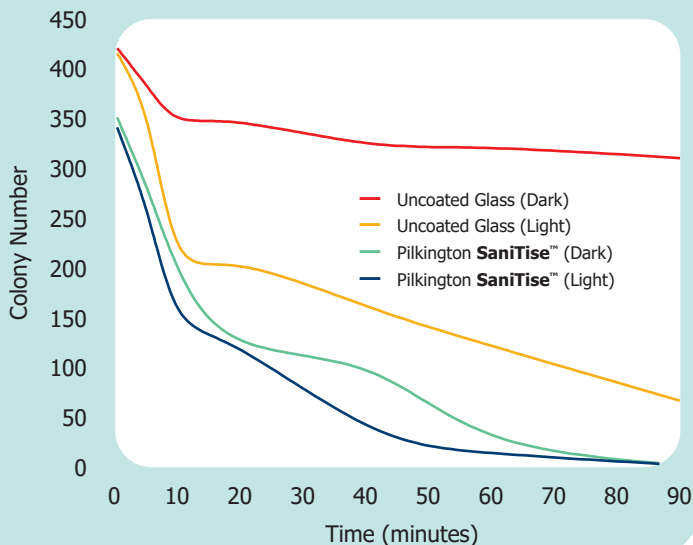

Once Pilkington **SaniTise™** reaches full activation, it will maintain its antibacterial and antiviral activity for enveloped viruses throughout its exposure to natural UV light. Even after the exposure to UV radiation has ceased, Pilkington **SaniTise™** will maintain this behavior for at least a further two hours.

Pilkington **SaniTise™** coating must be UV activated to be beneficial

## Antibacterial Testing:

Staphylococcus aureus F.

All samples pre-exposed to UV light before deposition of pathogens at 0 minutes; 'Dark' samples then kept in darkness, 'Light' samples exposed to UV.

## Features and Benefits

- Durable Pyrolytic coating
- Temperable
- Pilkington **Optifloat™** Clear and Pilkington **Optiwhite™** substrates available
- Compatible with commercial grade cleaning products

Product	Nominal Glass Thickness		Visible Light (%)			Solar Energy (%)		UV %	U-Factor				SHGC	SC

An insulating unit consists of two lites of equal glass thickness, and 1/2 in. (13.2mm) argon.

U-Factor is based on NFRC/ASTM standards.

All performance values are center-of-glass values calculated using the LBNL WINDOW 7.5 program.
