First shoots of the new structure

Pilkington **Profilit™** Micro

Pilkington **Profilit™** Micro Opal

Pilkington **Profilit™** Micro – **Product information**

The fresh and at the same time elegant design of the new pattern of Pilkington **Profilit™** Micro is like the all time successful standard – ornamentation #504 – the design classic of the Pilkington **Profilit™** family – without limitations available. As a matter of fact Pilkington **Profilit™** Micro is standing authentically in the profiled glass tradition, enlarges the variety of application and design possibilities together with another contemporary fresh surface design with a specific optical profile – elegant, new, modern, future orientated.

Elegant fine structure with diffusing effect

Pilkington **Profilit™** Micro is characterized through its extremely fine granular, irregular, surface structure, which from a close view appears like laminar sanded. This fine granular surface structure vanishes in the area when looking at this glass type from a distance

The individual pattern of Pilkington **Profilit™** Micro is characterised by the diffusing effect its fine granular structure has on the visibility of objects behind the glass. Outlines and silhouettes of people and items are discernible, appearing in pleasant, soft contours.

Pure Aesthetics – Classic Function

Through the combination of modified classical ornamentation and new soft optical lines, Pilkington **Profilit™** Micro meets with the design goals of modern façade architecture. Its optically innovative surface finish makes it possible to create a harmonious and modern look while using a classic and trusted building product. This striking new finish retains its functionality, providing very good light diffusion and daylight properties without detracting from its design led, aesthetically pleasing quality.

With all its advantages the new Pilkington **Profilit™** Micro is ideal for both exterior and interior glazing and is a perfect addition to the existing product range.

Pilkington **Profilit™** Micro – **types and combinations**

The new Pilkington **Profilit™** Micro is available without restrictions in all common profile types and variations of the Pilkington **Profilit™** System-Kit, such as e.g.:
