

Pilkington **SaniTise™**

## Technical Bulletin

This document has been created to help identify compatible materials for use with Pilkington **SaniTise™**. It contains information which is designed to provide you with up-to-date information about the technical aspects of Pilkington **SaniTise™**, in particular glazing materials that are compatible with the product.

The use of incorrect materials and in particular silicone-containing products with Pilkington **SaniTise™** can affect its performance.

If you have any further questions, please contact your NSG Group Sales Manager. Additional advice can be found in the "Handling and Processing Guidelines for Window Manufacturers" and local brochures. Further information is also available from our website:

<https://www.pilkington.com/en/global/products/product-categories/health-applications/pilkington-sanitise#brochures>

There may be other equivalent products that are also compatible, but which have not been named. For any product, guidance should be sought from the supplier regarding its suitability as a glazing material, or its compatibility with other glazing materials. The glazing method should also take into account the recommendations given in relevant national standards, regulations, codes of practice and recommendations of the manufacturer or supplier of the glazing material.

**Please check with the supplier that they have not changed their raw materials or manufacturing process in any way that would affect their product's compatibility.** NSG Group supply this information as a service to their customers but accept no responsibility for any loss or damage incurred as a result of using this information.

## Content

- 1 Introduction
- 2 Cleaning Agents
- 3 Glazing
- 4 Glazing Systems

**Note:**

When referring to Pilkington **SaniTise™** it includes Pilkington **SaniTise™** Clear, Pilkington **SaniTise™** OW, Pilkington **SaniTise™** Grey and Pilkington **SaniTise EverGreen™**.

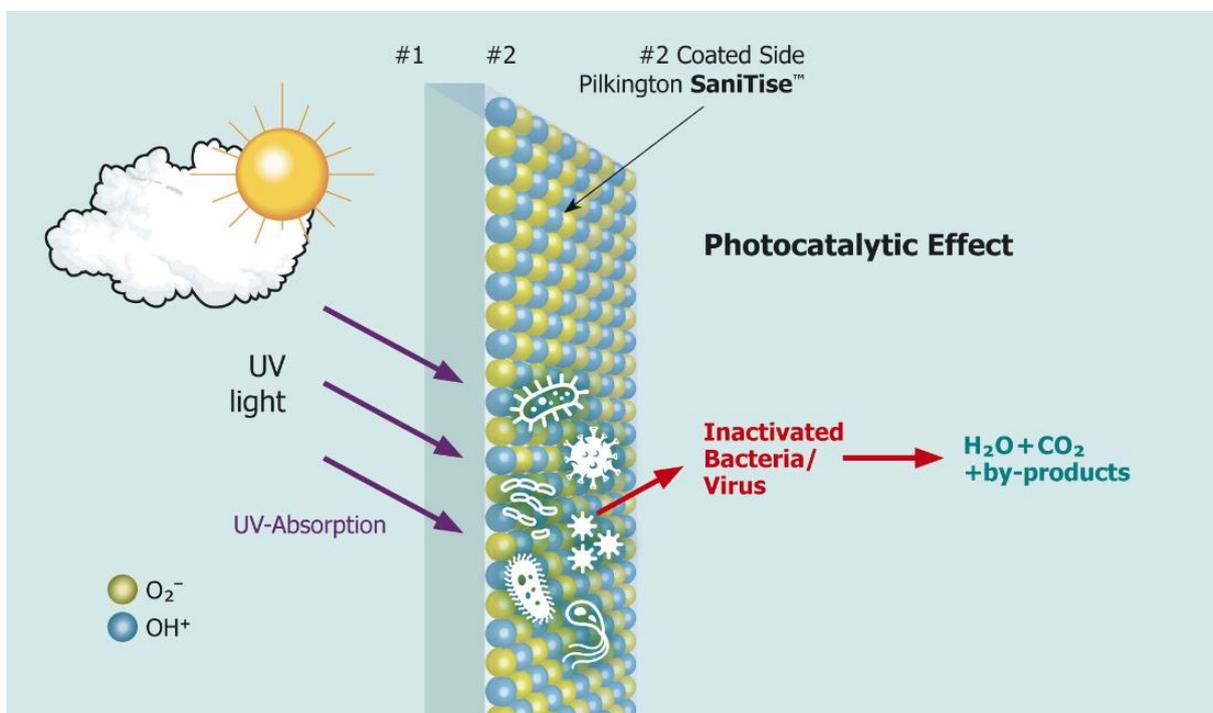

## 1 Introduction

Pilkington **SaniTise™** is a pyrolytic coated glass that provides antimicrobial properties. It helps protect against enveloped viruses and bacteria which was tested by leading universities and independent laboratories

Pilkington **SaniTise™** is a TiO<sub>2</sub> photocatalyst, which is naturally activated through exposure to daylight. It is a transparent coating, that can be used in all glazing applications with access to UV. It is fully toughenable and bendable and is highly resistant to corrosion and chemical and mechanical damage.

Product is a photocatalyst, using UV energy and airborne moisture to generate reactive oxygen species (ROS).

It is these ROS which inactivate the viruses and bacteria on the surface of the glass.

**Note:**

When referring to Pilkington **SaniTise™** it includes Pilkington **SaniTise™** Clear, Pilkington **SaniTise™** OW, Pilkington **SaniTise™** Grey and Pilkington **SaniTise EverGreen™**.

## 2 Cleaning Agents

The use of abrasive cleaners on Pilkington **SaniTise™** is considered as a remedial action which should only be undertaken after consultation with the NSG Group Technical Advisory Service.

Due to the nature of these materials, work should only be undertaken after reading the manufacturers' relevant safety literature. NSG Group cannot guarantee the effectiveness of the treatment or the effect the treatment will have on the coating as this will be severely affected by factors outside NSG Group's control, for example the nature and amount of the deposit.

Table 1 lists the names of cleaning agent suppliers which have products that are compatible with Pilkington **SaniTise™**.

Tab. 1: List of approved cleaning agent suppliers

**Note:**

When referring to Pilkington **SaniTise™** it includes Pilkington **SaniTise™** Clear, Pilkington **SaniTise™** OW, Pilkington **SaniTise™** Grey and Pilkington **SaniTise EverGreen™**.

### 3 Glazing

#### Dry Glazing

When glazing Pilkington **SaniTise™** the strongly preferred option is to use a co-extruded gasket or a dry rubber gasket.

Only if the use of a dry gasket or co-extruded system is not possible should a rubber gasket lubricated with glycerol or alternative silicone free / siloxane free lubricant be used.

Under no circumstances should a silicone oil lubricated gasket be glazed against Pilkington **SaniTise™**. This is because silicone oils have leaching properties and therefore are likely to cover the antiviral coating of Pilkington **SaniTise™**.

#### Wet Glazing

As with all sealant applications, it should be checked with the sealant supplier that the material is suitable for the intended application.

If there is a straightforward pathway for water run-off between the caulking and the Pilkington **SaniTise™** surface, the caulking material used should NOT be silicone. Alternatives include Silicone hybrids, MS Polymers and polyurethanes.

Table 2 lists the names of dry gasket suppliers marked with (1) and wet sealant suppliers marked with (2) which are known to have products that are compatible with Pilkington **SaniTise™** listed by countries.

**Note:**

When referring to Pilkington **SaniTise™** it includes Pilkington **SaniTise™** Clear, Pilkington **SaniTise™** OW, Pilkington **SaniTise™** Grey and Pilkington **SaniTise EverGreen™**.
