

Pilkington **Pyrostop**® Line Flush design meets panoramic view

Pilkington **Pyrostop**® Line is the monolithic version for butt jointed vertical glazing for internal application with integrity and insulation fire resistance performance.

The flush glazing is installed in the opening of a wall by means of a circumferential framing profile. Pilkington **Pyrostop**® Line units are glazed one next to the other with the butt jointed filled with special tape and being sealed with an approved silicone, forming a partition with an all-glass view without vertical frames between the glass units, which can be extended to any width. The slim vertical butt jointed with a nominal width of only 5 mm is unique to Pilkington **Pyrostop**® Line.

Facts and Figures:

- Flush glazing without vertical framing sections between the glass units up to 120 minutes for internal application only
- Monolithic glass composition (≥ 18 mm) ideally suited for open space design with a maximum area of unobstructed panoramic view
- Slim vertical butt joint (3-5 mm)
- All-glass view with uncompromised safety performance
- Tested in large dimensions (w x h: up to 1400 mm x 3000 mm); bigger dimensions on request
- Glazing unrestricted in width
- Polished edges for a high quality finish
- Wide range of colour and design combinations available (decorative foil, opaque interlayer, sand blasting for design or privacy and more)
- For extra clarity, maximum light transmittance and natural colour rendering Pilkington **Pyrostop**® Line comprises Pilkington **Optiwhite**™ depending on glass type
- Approved for use in timber and insulated steel / aluminium frames
- Tested corner solutions for 30 and 60 minutes
- Additional product compositions available to comply with specific static load requirements
